

SPRING, 1893.

BARR'S DAFFODILS.

AWARDED THE ONLY GOLD MEDAL, AT THE SECOND GREAT
DAFFODIL CONFERENCE, APRIL 15th to 18th, 1890.

THE HOME OF NARCISSUS CYCLAMINEUS.

This unique Daffodil was found wild in its largest development in wet meadows. Rev. Dr. Watson, Largs, has flowered it annually since its introduction; Rev. H. Ewbank, Isle of Wight, has it happy on a dry rockwork; Mr. G. H. Cammell, Hathersage, has it happy at the foot of a rockwork and increasing; at Kew, Mr. Dewar reports successful culture. Dr. Foster, of Cambridge, has grown it in his garden (subsoil of chalk) since 1889, and each year it has improved, and is now increasing. Mr. F. W. Burbidge has grown it successfully since 1886 in pots, frames, and out-doors against a warm house. Mr. C. J. Backhouse, of Darlington, grows it successfully all over his garden, but on rockwork the flowers are largest.

BARR & SON,
KING STREET, COYENT GARDEN, LONDON.

Nurseries—LONG DITTON, SURREY.

A few minutes from Surbiton Station (S.W.R.)

Visitors invited to the Nurseries during Spring, Summer, and Autumn, to see BARR & SON'S Grand Collections of IRISES, SINGLE and DOUBLE PÆONIES, PERENNIAL SUNFLOWERS, Etc., and other Fine HARDY HERBACEOUS PLANTS, also many Beautiful and Interesting HARDY BULBOUS PLANTS.

A Fine Display of CUT FLOWERS of HARDY BULBOUS and HERBACEOUS PLANTS is maintained during the Season at King Street, Covent Garden.

SPECIAL NOTICES.

- I. **Quality.**—All bulbs and plants are carefully selected.
- II. **Experimental Grounds and Nursery, Long Ditton,** five minutes from Surbiton Station, S.W.R. (close to the Surbiton New Recreation Grounds).—Visitors at all seasons will find many things of interest and beauty in **Hardy Bulbs, Tubers, and Hardy Herbaceous Perennial Plants.** In spring the brilliancy of the bulb fields surpasses description. *Visitors invited to enjoy the floral treat.*
- III. **Parcel Post.**—We shall in all cases use the **Parcel Post** when cheapest and the articles ordered weigh under eleven pounds, and admit of being packed for safe transmission by "Parcel Post."
- IV. **Carriage by Rail** may be deducted at settlement of account on orders for Bulbs to any Railway Station in Great Britain, and to all ports on the Irish Coast.
- V. **Orders, paid in advance.**—If it is necessary to send such by Rail, carriage will be prepaid if requested, or, if not requested, a liberal equivalent in goods will be added.
- VI. **Packages.**—A small charge is made for these, and if returned within a fortnight, allowance made for the same. *Returned empties should invariably have the sender's name on the address label for identification, and a notification should be sent by post, stating date of dispatch and name of Railway Company.*
- VII. **Fruit and Forest Trees, Shrubs, Plants in pots, Soils, Watson's Lawn Sand, Manures, Insecticides, Barr's Cut Flower and Fruit Conveyance Boxes, Barr's Waltonian Indoor Frames, Barr's Improved Hydropult Garden Engines**—on these we do not allow carriage.
- VIII. **Five per cent.** may be deducted from accounts if paid within one month from date of invoice.
- IX. **Post Office Orders and Postal Orders** may be made payable at Post Office, Covent Garden, W.C., or any other Post Office; these and all cheques should be crossed, adding the words "and Co.," or by preference "London and County Bank." Small amounts in a Registered Letter may be remitted in Postage Stamps, or coin.
- X. ~~For~~ **Naming Daffodils.**—Cut specimens of Daffodils we undertake to name correctly, at the charge of 6d. each, 2s. 6d. per dozen, 15s. per 100. This charge is made not for profit, but to cover attendant expenses. Address all cut specimens to be named, accompanied by a remittance, to our Nursery, Long Ditton, Kingston-on-Thames, Surrey.
- XI. **Cut Daffodil Flowers.**—When in bloom out-of-doors, cut specimens of New Daffodils, correctly named, we forward post-paid at a low charge, thus offering a good opportunity to those who wish to extend their knowledge of these lovely flowers of spring. If a list of the varieties possessed by the sender is enclosed, such will be omitted; the names sent in such cases should range in column fashion and alphabetical order. A remittance should accompany the order.

- XII. **Daffodil Illustrations and Coloured Plates** can be had, post-free, at following charges
- No. 1. Two large uncoloured Illustrations—one representing a Group of Yellow Trumpet Daffodils, and the other a Group of White Trumpet Daffodils—*drawn and arranged for the "Gardeners' Chronicle" by Agnes Barr.* The two Plates for 1s. 6d.
- No. 2. Beautiful Coloured Plate of a Group of White Trumpet Daffodils. 1s.
- No. 3. Beautiful Coloured Plate of Daffodils, representing *Incomparabilis Gloria Mundi, Incomparabilis Princess Mary, and Leedsii Beatrice.* 1s.
- No. 4. Beautiful Coloured Plate of Daffodil *Bicolor Horsfieldii.* 1s.
- No. 5. Beautiful Coloured Plate of Daffodils, representing *Cyclamineus (the Cyclamen-flowered Daffodil) and Triandrus albus (Angel's Tears Daffodil).* 1s.
- No. 6. Beautiful Coloured Plate of Daffodils, representing a Group of *Poeticus* and *Burbidgei* varieties. 1s.
- No. 7. Beautiful Coloured Plate of a Group of Daffodils, including *Cernuus pulcher, Johnstonii, Queen of Spain, Bicolor J. B. M. Camu, Leedsii Superbus, Nelsoni* varieties, etc. 1s.
- N.B.—A few copies still remain of "Ye Daffodyl," price 1s. This is a record of the First Daffodil Conference, 1884, with a complete descriptive list of all known Daffodils, ancient and modern.
- XIII. **Barr's Daffodil Prize Medals for 1893,** to be awarded by the Royal Horticultural Society, 117 Victoria Street, Westminster, London. The Secretary of the Royal Horticultural Society will supply dates of exhibitions, and make entries, and take charge of exhibits sent from distant parts. Exhibitors residing within a reasonable distance of London are required to attend to their own exhibits. All entries to be made three clear days in advance of the day of exhibition, which is a Tuesday, and should be posted on a Friday, addressed Mr. A. F. Barron, R.H.S. Gardens, Chiswick, London.
- Feb.—Best Collection of Forced Daffodils** (*Polyanthus Narcissi* excluded). Open to all classes of exhibitors. Award—**Barr's Large Silver Medal.**
- Best Seedling Daffodil** (not yet in commerce), raised in England, Scotland, or Ireland, and shown during the season, accompanied by the history of its origin. (Not a *Polyanthus Narcissus*.) Open. Award—**Barr's Large Silver-Gilt Medal.** (This Prize may be competed for at any meeting of the Daffodil Committee, the last being in May, when the Award will be declared to the best specimen which has been exhibited during the season.)
- March 14th.—Best Collection of Forced Daffodils** (*Polyanthus Narcissi* excluded). Open. Award—**Barr's Large Silver Medal.**
- March 28th.—Collection of Daffodils** (*Polyanthus Narcissi* excluded). Open. 1st Prize—**Barr's Large Silver Medal.** 2nd Prize—**Barr's Small Silver Medal.** 3rd Prize—**Barr's Large Bronze Medal.** 4th Prize—**Barr's Small Bronze Medal.**
- April 11th.**—Same Prizes as offered for March 28th. Open.
- April 25th.**—Same Prizes as offered for April 11th. Open.
- May 9th.**—Same Prizes as offered for April 25th. Open.

N.B.—No Entrance Fee necessary. Ladies and Gentlemen are admitted Fellows of the Royal Horticultural Society by Annual Subscription, from 21s. Gardeners can be nominated Associates by Annual Subscription of 10s. 6d.

Part I.—A SELECT DESCRIPTIVE LIST

OF

BARR'S HARDY DAFFODILS,

FOR SPRING-FLOWERING IN OR OUT OF DOORS.

Awarded the only Gold Medal at the Daffodil Conference, April 15th to 18th, 1890.

The Collection of Hardy Daffodils from which this Select List has been compiled, embraces no fewer than 500 species and varieties, and is not only the largest Assortment in existence of this beautiful family, but is the most extensive Collection ever got together.

Visitors are invited to inspect BARR'S DAFFODILS in flower during March, April, and May, at LONG DITTON NURSERY, close to the Surbiton new Recreation Grounds, being a few minutes from SURBITON STATION, South Western Railway, from Waterloo direct, or from any Station on the Metropolitan District Lines of Rail, changing at Wimbledon for Surbiton.

(GENERAL BULB CATALOGUE, *Free on Application*, of Hyacinths, Tulips, Crocuses, Snow-drops, Chionodoxas, Snowflakes, Scillas, Lilies of the Valley, Dicyclotras, Spiræas, English Irises, Spanish Irises, Species of Irises, Ixias, Sparaxis, Tritonias, Babianas, Ranunculus, Anemones, Cyclamen, Hyacinthus candicans, Gladioli, Amaryllis, and a Choice Collection of Beautiful and Rare Bulbs and Tuberos-rooted Plants.)

CONTENTS.

Part I.—Revised List of Hardy Beautiful Daffodils, embracing High-class and Distinct Varieties only, *omitting many of the earlier introductions which have been superseded by finer kinds at equally moderate prices.*

For the convenience of purchasers we have had the names of the Daffodils set up in Type of three sizes. The highest class, and most distinct, in the LARGEST TYPE; the next in quality the SMALLER TYPE; and the lower quality in the SMALLEST TYPE.

Part II.—A FEW BEAUTIFUL

AUTUMN, WINTER, AND SPRING-FLOWERING BULBS

FOR EARLY PLANTING,

Including RARE CROCUS SPECIES, COLCHICUMS, Etc.

An account of Mr. Barr's travels in Spain in search of information on Daffodils will, perhaps, appear in our Daffodil Catalogue, 1893.

BARR'S HARDY DAFFODILS, DAFFADILLIES, DAFFODOWNDILLIES.

To these was Awarded the only Gold Medal of the Daffodil Conference, held in the Chiswick Gardens of the Royal Horticultural Society, April 16th to 18th, 1890.

Extract from "The Gardeners' Magazine," 19th April, 1890.

The Editor (the late Mr. Shirley Hibberd) remarks, "Daffodils will never cease to give delight, will never cease to be collected, and cultivated, and exhibited, and talked about, for, with all our wealth of hardy spring flowers, this group of beauties is unequalled for splendour of appearance, and all the qualities of a spring flower that engage the moral nature in a series of wholesome sympathies, to augment the delight that begins in the eye.

"An incident of recent occurrence, of which we have cognizance at first hand, may be brought to bear on this grave question of reducing the number of varieties by severe selections. A gentleman universally respected for his knowledge, judgment, and taste in matters horticultural, demanded of a cultivator of Narcissi, assistance in making a selection of the very, very best, and the response was in a proper spirit. The cultivator consigned to one of his side pockets one hundred blank labels, the other saying that a dozen would be enough. When a variety had been selected as one of the very, very best, the name was written on one of the labels, and attached to the cut specimen. The inspection and selection proceeded pleasantly; the critical visitor in the free flow of his admiration forgot the limits he had proposed, and thus many very best flowers were cut and labelled. But now the business halted, for the trader said a fresh supply of blank labels would be required, and must be sent for, the visitor having already selected one hundred of the very, very best, while a considerable portion of the collection still remained for inspection. The anti-climax tells its own tale, and may serve as a warning, that to select a dozen, or even fifty, of the very best Daffodils, is a business more easily talked of than performed." *The editorial in extenso we commend to those amateurs who are calling for a reduction of the alphabet before they have mastered their letters.*

Extract from "The Gardeners' Chronicle," April 12th, 1890.

"THE DAFFODIL KING."

"There will be few, if any, who will be disposed to question the right of Mr. Peter Barr to this designation. Previous to his accession, Daffodils were few in number. Gerard and Parkinson and Dr. Hill [Hale's Eden] knew a few varieties. Later on Haworth entered the arena. Dean Herbert, whose merits as a botanist are better appreciated by his successors than they were by his contemporaries, experimented with them. Leeds and Backhouse and Nelson won reputations as hybridists. But in spite of these labourers, those who can look back twenty or twenty-five years will remember that the sorts generally known and cultivated could be counted by units, whereas scores or even hundreds would now be required. What originally induced Mr. Barr to take up the subject we do not know; certain it is that he has taken it up with the indomitable zeal of an enthusiast. Putting commercial considerations on one side, as of secondary importance, he, though a man of business, has allowed himself to be governed by his love of Daffodils, and has spared neither labour nor money in their collection. He has made long and tedious journeys in rough countries in quest of his favourite plants. On these occasions his couch has not seldom been the rock, the sky his coverlet. Nor has collection been his only aim. Study of their peculiarities has been, and is, a perfect passion with him. Observation and research are continually increasing his store of knowledge, for truly nothing relating to Daffodils is foreign to Mr. Barr."

In our present issue we reprint only the first paragraph of the masterly article written on Daffodils, by the Editor of the "Gardeners' Chronicle," after his visit to our Daffodil grounds—the article is full of so much valuable matter we recommend all Daffodil amateurs to read it. It is printed in extenso in our Daffodil Catalogue of 1890. "An incident of recent occurrence" in the above extract, which we have made from the "Gardeners' Magazine," refers to the visit of the Editor of the "Gardeners' Chronicle" to our Daffodil grounds, and shows the utter fallacy of the small selections, so often put forth in newspapers as selections of the very best kinds (instead of the writer modestly saying a selection of a few good sorts), and thereby misleading amateurs who thus suppose that the 6, 12, or 18 names given represent all that is of value.

Extract Condensed from the "Journal of Horticulture," May 14th, 1891.

BARR'S DAFFODILS.

"Daffodils from Barr's are to be found in gardens all over the kingdom and far beyond its shores, but Barr's own Daffodils are only to be seen in all their diverse beauty at Long Ditton, in Surrey. Thither do specialists and lovers of this great family of spring flowers wend their way in the season, not only to admire the floral feast, but to gain information, and study the characters of the different varieties under the guidance of the Master. Mr. Barr is a Master of Daffodils in a double sense—first as the possessor of the finest collection in the world, and secondly by the great knowledge he has acquired through research, travel, and a long and critical observation. The Daffodil fields are now about ten minutes' walk from Surbiton Station on the London and South Western Railway, reached in about twenty minutes by express from Waterloo. There are fifteen acres, and at the least half the ground is closely planted with 500 species and varieties of the flowers, with several of which Mr. Barr's name will be associated for generations to come.

"A very eminent man once went to take particulars about the flowers, and tell the world about them, but the task was too great, so he wrote an interesting essay on Mr. Barr and his work, and crowned him the Daffodil King, leaving his subjects to be dealt with on a future occasion."

"On a special bed a few cherished gems were flowering. They were being subjected to very close scrutiny by three or four 'experts,' while one or two raw students looked on and listened, for it was an open conclave. The experts were the Master, Rev. C. Wolley Dod, Mr. Cammell, and Mr. Dewar. 'Now then,' said Mr. Barr, invitingly, 'what do you think of that?' pointing to a massive golden bloom, and continuing, 'We call it the best—the best florists' flower of all yellow Trumpet Daffodils. We raised it from seed, and its name is Monarch.' A solemn pause, eventually broken by Mr. Cammell, 'Yes, a grand flower, look at its substance and form?' 'Ye'es,' re-echoed the keen-eyed, cautious Mr. Wolley Dod, 'but isn't it a good deal like Emperor? I should like to see Emperor with it.' 'It's from Emperor,' explained the raiser, 'but look at the flat, firm, imbricated segments, and,'—but before he could

[Barr and Son,

finish his scutcheon Mr. Dewar drew from behind him the best Emperor he could find (for, like a canny Scot, he was already provided) and placed it with the Monarch; tho' all could see that, fine as both were, Monarch beat the Emperor. The trumpet without a fault, and the stout overlapping perianth segments without a twist or curl. Barr's Monarch then heads the list of Golden Trumpet Daffodils.

"But what's this?" asked No. 1 of the experts, in surprise, "that is something very extraordinary!" "Wonderful!" observed No. 2. "Never saw anything like it!" remarked No. 3. "No," the Master dryly chimed in, "because there is nothing like it; it is Weardale Perfection." The trumpet was two inches long, symmetrical, and recurving with the utmost regularity at the mouth, which was equal in width to the length of the tube; colour pale primrose, and the broad segments nearly white. Weardale Perfection was alone worth going to see, and, take it all in all, it is the finest Daffodil of its kind and colour that has ever been raised.

"Other handsome varieties in the Ajax section were Glory of Leyden, with its huge smooth golden blooms; Captain Nelson, with its long clear yellow trumpet and bold spreading segments; Emperor also stood out boldly; but Santa Maria, one of Mr. Barr's Spanish fluids, is the richest in colour of all, not excepting the noble Maximus; P. R. Barr, a 'small Emperor,' is very free and good. Several of the early varieties were over and others fading. In the white-winged bicolor section, J. B. M. Camm, Dorrien Smith, John Parkinson, James Walker, Harrison Weir, Michael Foster, and Grandis were all fine, while Murrell Dohell and Alfred Parsons, similar in colour, were conspicuous by their neatness.

"Small, in comparison with those mentioned, yet smooth, distinct, and beautiful, are the Johnstons varieties, Queen of Spain and Mrs. George Cammell. The first is the most effective in a mass, but the flowers of the second are individually more refined. The clear soft yellow and clean finish of these varieties render them particularly appropriate for vase decoration.

"Mrs. J. B. M. Camm and Madame de Graaff lead the way in the white and sulphur-coloured trumpet varieties. Dr. Hogg, C. W. Cowan, Mr. and Mrs. Burhidge, Mrs. Vincent, Lady Grosvenor, and Snowflake, attracted attention in passing down the beds, by their soft chaste beauty, but there are several more of these 'white Daffodils' well worth growing.

"Judging by the enormous number grown of the *Incomparabilis*, *Barrii*, *Leedsii*, and other types, it is evident that there is a great demand for the lighter and more elegant forms of Daffodils. When flowering in clumps or masses they have a pleasing effect, and when cut are admirably suited for vase decoration. It is difficult to choose from such a great assemblage of good sorts. Among those possessing strong claims to attention of the *Incomparabilis* section were Autocrat, Frank Miles, Gloria Mundi, Gwyther, Beauty, C. J. Backhouse, King of the Netherlands, Alhert Victor, Lorenzo, Titan, Princess Mary, Mahel Cowan, Queen Bess, and Splendens; and as a giant among them is the bold Sir Watkin, a striking flower, but 'wanting in refinement' say connoisseurs. The cups of the flowers vary from pale yellow to deep orange, and the segments from white to yellow, and the general effect bright and cheerful without any suspicion of gaudiness.

"The *Leedsii* varieties are paler, some approaching pure white, and as a group may be fairly described as chaste and charming. The Duchess of Wostminster, Gem, and Minnie Hume, a very delightful trio; also very attractive were Beatrice, Duchess of Brahan, Elegans, Katherine Spurrell, Mrs. Langtry, Palmerston, Maria M. de Graaff, Grand Duchess, and Princess of Wales.

"The *Barrii* varieties are distinctly attractive. Conspicuous will long remain a favourite, and such as Maurice Vilmorin, General Murray, Orphée, Crown Prince, Flora Wilson, and Dorothy Wemyss, all press their claims to attention. Passing the distinct *Nelsoni*, *Backhousei*, *Macleai*, *Bernardi*, *Tridymus* and *Triandrus* varieties, not because they are inferior, but because mention cannot be made of even the cream of the sorts, occupying seven or eight acres of ground, in a page of the Journal, we come to the 'Burhidgeis,' which link some of the others with the Poets' *Narcissus*, and find distinct and good varieties in *Vanessa*, like a yellow 'Poet's,' *Agnes Barr*, *Ellen Barr*, *Model*, *Ossian*, *John Bain*, *Little Dirk*, *Baroness Heath*, and *Crown Princess*, jotted down in the pocket book as possessing attractive characteristics in either form or colour, or both; and then there are 'Poets' by the score, a whole army of them, early and late in all their pearly beauty.

"The entire collection at Long Ditton represents a great national or international museum of Daffodils that could only have been provided by years of perseverance, great expenditure, and incessant work, prompted by a deep love for the flowers that conquered all difficulties, in acquiring so many, selecting them so well, 'weeding' them so carefully, and arranging them so systematically; and surely all who admire them must hope Mr. Barr will spend many happy years amongst them, and enjoy the reward to which he is justly entitled."—ONE OF THE STUDENTS.

This is what Mr. William Robinson said about Daffodils and their adaptation, in his Paper at the Conference on Hardy Flowers, Chiswick, July 7 and 8, 1891.

"The most important of all early flowers is the *Narcissus*. Five years ago I planted many thousands in the grass, the most important being the *Star Narcissus* (*N. incomparabilis*, &c.) in great variety. They have thriven admirably, flowered well and regularly, and the flowers are large and handsome, and have not diminished in size. In open rich heavy bottoms, along hedgerows, in quite open loamy fields, in every position I have tried them. They are delightful when seen near at hand, and also effective in the picture. Good results could be obtained with the finer kinds of *Narcissus* by wood walks and open copses, which abound in so many English country places. With the common English, Irish and Scotch Daffodils I have had good results, thriving better, and flowering much handsomer than the wild plant—not uncommon in Sussex and many other parts of England. The Tenby Daffodil is very sturdy and pretty, and never fails us. A very delightful feature of the *Narcissus* meadow gardening is the way great groups in succession follow each other in the field. When the *Star Narcissus* (*N. incomparabilis*, &c.) begin to fade a little in their beauty, the Poets' *Narcissus* follow, and as I write this paper we have the most beautiful picture I have ever seen in cultivation. Five years ago I cleared a little valley of various fences, and so opened a pretty view. Through this runs a streamlet, and we grouped the Poets' *Narcissus* near it, and in a little orchard that lay near, and through a grove of Oaks. We have had some beauty every year since, but this year the whole landscape was a picture, such as one might see in an Alpine valley! The flowers were large and beautiful when seen near at hand, and the effect in the distance was delightful. I need say no more to illustrate the capabilities of this magnificent group of plants for wild gardening. There are many estates which have much greater advantages than mine in showing the beauty of the *Narcissus*, in the rich stretches of grassland, pleasure-ground walks, etc., where various points may be adorned in the ways indicated—meadows, woods, copses, wood walks, margins of lakes and ponds, and drives through ornamental woodland, and pleasure parks, where the grass need not be mown till the foliage of the plants is somewhat matured."

CULTURE, ADAPTATION, ETC., OF THE DAFFODIL.

Daffodils are the most graceful and beautiful of all hardy Spring flowers; they have for centuries adorned our gardens, and withstood uninjured our severest winters better than any other spring flower,

"Daffodils
That come before the swallow dares, and take
The winds of March with beauty."

For growing in beds, mixed borders and shrubberies, the Daffodil surpasses all other flowers of spring, when naturalized in orchards, woodland walks, sloping banks, meadows, margins of lakes and ponds, the effect is splendid. All the strong growing Daffodils may be naturalized, including such sorts as Emperor, Empress, Horsfieldii, many of the white trumpet varieties, also all the Incomparabilis, Barrii, Leedsii, Backhousei, Nelsoni, Bernardii, Tridymus, Odorus, Burbidgei, Poeticus, etc. In orchards many sorts which do not succeed in gardens will be found to thrive, and we advise that all kinds which do not take kindly to garden culture should be removed to the orchard or hedgerow. In all such places the noble flowers of the daffodil are seen to great advantage. The slender and dwarf-growing sorts, Nanus, Minimus, Juncifolius, Triandrus, Corbularias, Cyclamineus, etc., do well on rockwork, and select places in grass; Minimus, Juncifolius, and Triandrus are found wild in mountain pastures where the soil is shallow and firm; Corbularia and Cyclamineus where the soil is soft and wet in winter and spring, but dry in summer. For culture under glass, 3 to 6 bulbs of the strong growing sorts cultivated in a pot, the effect is splendid; of the dwarf growing kinds enumerated 6 to 18 bulbs in a pot give a fine effect, and also make charming edgings.

Daffodil flowers can be had from January to June, FIRSTLY, by planting in pots or boxes; ; SECONDLY, planting out-of-doors, in September; and, THIRDLY, planting out-of-doors, in succession, from September to Christmas. The late plantings give beautiful flowers in May. To flower in January or February, in pots or boxes, the bulbs should be put in as early in the season as possible.

Out-of-doors the various kinds of Daffodils form a natural succession. In mild seasons, N. Pallidus præcox and N. Obvallaris flower early in February, and are followed by others in succession.

Amongst the new handsome Daffodils found by Mr. Barr, in Spain, N. Santa Maria is the richest orange-yellow known, and Johnstoni Queen of Spain, is a great beauty, being exceptionally elegant in form, and of a pleasing soft yellow.

In arranging Daffodils for effect in the flower garden, or in potting up for indoor decoration, let it be borne in mind they form a natural succession, which is fully explained under the heading of each group, and simply noticed here to show which groups flower together. FIRST, the earliest are the Trumpet Daffodils, and early-flowering Corbularias. SECOND, flowering together—Incomparabilis, Barrii, Leedsii, Odorus, Triandrus varieties, Early-flowering Poeticus, and Early-flowering Burbidgeis. THIRD, Nelsoni, Tridymus, Backhousei, Bernardi, and Jonquils. FOURTH, Bilorus, late-flowering Poeticus, late-flowering Burbidgeis, Schizanthus orientalis and Gracilis. In the middle season, representatives from all the groups may be found in bloom at the same time, therefore, those wishing to see our collection, and can only make one visit, should do so in April.

The Daffodils enumerated and described in the following pages, comprise all the finest sorts in commerce. They for the most part are varieties we have been introducing annually for many years, having been raised by the late Mr. William Backhouse, and known as the "Weardale Daffodils," also by the late Mr. Edward Leeds, and known as the "Longford Bridge Daffodils." These NEW DAFFODILS became the property of Mr. Barr, who arranged and named them, the names afterwards being revised by a Committee, appointed by the first Daffodil Conference, held 1st April, 1884. An account of the conference, with much valuable information, and the authorized list of Daffodils, will be found in "Ye Narcissus or Daffodil," by F. W. B. & P. B., price 1s.

CULTURE AND ADAPTATION OUT OF DOORS.—The Daffodil may be grown in any soil and situation, but thrives best in a fertile well drained loam (avoid manure as much as possible), and, in the warmer parts of England, when possible, they should be planted in a situation facing north or north-east, but protected from north or north-east winds. In planting, the top of the bulb should be about three inches below the surface, according to its size; but when grown in permanent beds, &c., where summer flowers are cultivated over the bulbs, plant an inch or two deeper, and use only the strongest growing Daffodils for such purposes, taking care the drainage, natural or artificial, is perfect. For beds, the large-flowering trumpet and Incomparabilis varieties of Daffodils are charming, and for edgings, the dwarf growing kinds, such as Cyclamineus, Minor, Nanus, Minimus, Nelsoni minor, Triandrus albus, Juncifolius, and all the Corbularias. The Corbularias, lift in July and replant in October. On the naturalization of Daffodils, see what Mr. Robinson says, page 3.

CULTURE AND ADAPTATION INDOORS.—Use three to six bulbs of strong-growing sorts, according to size of bulb, in a 4 or 5-inch pot; small-growing kinds, such as N. Minimus, Nanus, Minor, Cyclamineus, Triandrus, Juncifolius, and Corbularia, a greater number of bulbs should be used. These dwarf-growing, small-flowered species are most charming in pots. If Daffodils are grown for cutting early in the season, plant thickly, in boxes 15 inches by 10, and 5 to 6 inches deep, using ordinary potting soil. The pots or boxes should then be placed out of doors, on a bed of ashes, and covered with 6 inches of the same material, or with cocoa fibre, if it can be had. The pots or boxes to remain out of doors till full of roots, and top growth has commenced. Portions may then be removed indoors, in succession, and placed in a moist forcing-house, and plentifully supplied with water, care being taken that the plants do not get drawn, from an insufficient supply of air.

A selection of Daffodils should consist of varieties from the three groups. The Trumpet and Corbularia Sections of Daffodils, out of doors, flower in succession, one variety following the other from February till May. The Nonsuch or Incomparabilis and other sections of hybrid Daffodils, begin flowering out of doors in March, and succeed each other till May. The Burbidge's Daffodils, the Poet's Narcissi, the Tazetta or Bunch-flowered Daffodils, &c., out of doors, commence flowering early in April, and furnish a succession of blossoms till June. When grown under glass, all the Daffodils flower much earlier than the periods above named.

Cut blooms of Daffodils are always acceptable, and are in abundance at a season when other flowers are scarce. They supplement and associate admirably with hot-house flowers. For upwards of twenty years, for three months in Spring, cut flowers from our collection of Daffodils have been exhibited at the various London Flower Shows and Fortnightly Meetings of the ROYAL HORTICULTURAL SOCIETY, also at the Spring Flower Shows held at the ROYAL BOTANIC GARDENS, CRYSTAL PALACE, ROYAL AQUARIUM, and other places in town and country.

At the above-named places we have been awarded numerous Gold and Silver Medals, Prizes, Certificates, Votes of Thanks, etc. Our Grand Display of Daffodils at the Second Great Daffodil Conference, held April 15th to 18th, 1890, was awarded the ONLY GOLD MEDAL.

[Barr and Son,

Daffodils—Group I.—continued.

All the Trumpet Daffodils are prized for pot-culture, flowering under glass with the Hyacinth, and should be cultivated in the same way, three to five roots in a 4 or 5-inch pot. The cut flowers of Daffodils are much in demand for bouquets and vases. For general cultural directions, see page 4.

☞ Explanation why different sized types have been used in the NAMES of the Daffodils.

- (1). EMPEROR. This type indicates the higher quality.
- (2). ALBICANS. This type indicates the next quality.
- (3). BIFLORUS. This type indicates the lower quality.

The very distinct species which do not admit of comparison, such as *Corbularia*, *Cyclamineus*, *Minimus*, etc., we place with the higher quality, and those which rank above the higher standard are indicated by the word extra.

N.B.—We have expunged from our Catalogue the names of Daffodils which are superseded by others of higher quality at similar prices.

Daffodil Bulbs supplied September, October, November, and December.

Each Spring our Collection of Daffodils undergoes a critical examination, which results in our expunging superseded varieties, and as nearly all the finest Daffodils have emanated from our Collection, the kinds we catalogue may be accepted as the finest and most distinct. The following list embraces the highest class, and most distinct varieties, surpassing in beauty and diversity all other assortments of Daffodils offered to the public. Our Daffodil Catalogue describes the cream of our Collection (about 500 kinds), consisting mostly of new sorts, some of which were offered for the first time 1887, 1888, 1889, 1890, 1891, and the present year.

* indicates the new varieties of Daffodils which we had introduced up to 1886.

DAFFODILS.—GROUP II.—MEDIO-CORONATI (BAKER).

Queltia, Phylogyne, Ganymedes, etc., of Salisbury, Haworth, and Herbert; Peerless, Nonsuch, Chalice-Shaped Crown, etc., of Parkinson.

DISTINGUISHING CHARACTER—*Crown or cup half as long as the divisions of the perianth, but in one or two cases three-quarters as long.*

The light elegant varieties in this group are hybrids, excepting Triandrus, Odorus, and Juncifolius, which are species. Incomparabilis is found wild in France. Herbert, Leeds, and Backhouse, however, produced it by crossing Poeticus with a Trumpet Daffodil. Macleai (*Panza bicolor of Salisbury*) is considered to be a hybrid between a Tazetta and a Trumpet Daffodil. Although we have no positive data as to the parentage of all the new hybrids and varieties described in this group, we think it may fairly be assumed that Poeticus and the Trumpet Daffodils gave all the varieties of Incomparabilis; Poeticus and Incomparabilis would give Barrii, which may be described as shorter cupped forms of Incomparabilis; Poeticus and Cernus, or Albicans, gave the varieties of Leedsii, "the Eucharis-like Daffodil," which has the perianth white, and the crown white, or primrose. Mr. Baker however suggests as the parent of Leedsii, Montanus and Poeticus: those who at present are hybridizing Narcissi will perhaps settle this point. Humei, Mr. Baker suggests as a hybrid of Montanus and Incomparabilis. Poeticus and Bicolor would give Nelsoni, Backhousei, and Sabini. Bernardi we know to be a hybrid between Poeticus and Variiformis, Mr. Barr having collected it from amongst these two species. Tridymus, we think, is a hybrid between a Tazetta and a Trumpet Daffodil.

The varieties in this group commence flowering in March, and furnish a succession till May. They are all of great elegance and beauty, and, as cut flowers, are extensively used for furnishing vases and table bouquets.

☞ All the varieties enumerated in Group II. are prized for pot-culture, flowering under glass with the Hyacinth, and should be cultivated the same way, 3 or 5 large bulbs in a 5-inch pot; Narcissus which produce small bulbs, such as Triandrus and Juncifolius, 6 to 12 bulbs to a 5-inch pot. The cut flowers of this Group are much in demand for bouquets and vases. *General cultural directions, p. 4.*

☞ THIS GROUP II. ARE ALL HYBRIDS, WITH THE EXCEPTION OF N. TRIANDRUS, N. ODORUS, AND N. JUNCIFOLIUS.

Daffodils—Group II.—continued.

NARCISSUS INCOMPARABILIS.

(*Star Narcissus.*)

NONSUCH, PEERLESS, AND CHALICE-CUPPED DAFFODILS.

All the varieties of Incomparabilis are exceedingly decorative in pots, and are extensively used for this purpose, 3 or 5 bulbs in a 5-inch pot. For beds and borders very decorative, naturalized in grass very effective. See what Mr. William Robinson says of them under the name "Star Narcissus," p. 3.

Nonsuch Self-Yellow Varieties.

DAFFODILS.—GROUP III.—PARVI-CORONATI (BAKER).

The Small-crowned Daffodil or True Narcissus, which includes

Burbidgei and Poeticus (the Purple-ringed Daffodil); Biflorus (the Primrose-Peerless Daffodil); Polyanthus or many-flowered Narcissus (Hermione and Helena of Haworth); Gracilis, Schizanthus orientalis, and Sweet-smelling Jonquils.

DISTINGUISHING CHARACTER—*Crown less than half as long as the divisions of the perianth.*

In this series, Poeticus (the purple-ringed Daffodil) is the true Narcissus; Burbidgei is a hybrid one remove from Poeticus, and is the connecting link between Groups II. and III. (See *Coloured Plate in "The Garden,"* 1880.) Biflorus is Parkinson's Primrose-Peerless. Gracilis and Tenuior are the Helena of Haworth; Jonquil, the Jonquilla of Linnæus; Polyanthus Narcissus, the Hermione of Haworth and Tazetta of Sibthorp.

The early-flowering Poeticus varieties commence flowering in March, and the late-flowering varieties close the Daffodil season in June. Burbidge's hybrids of Poeticus flower in succession from March to middle of May. Gracilis, Schizanthus orientalis, and the Double White Gardenia-flowered Daffodil, are among the latest to bloom.

*a The Daffodils in this Group are graceful pot-plants for indoors, flowering with the Hyacinth, and should be cultivated in the same way, 3 or 6 bulbs in a 4 or 5-inch pot. The cut flowers of this section are greatly in demand for bouquets and vases. *General cultural directions, page 4.*

NARCISSUS BURBIDGEI.

(*Star Narcissus.*)

Burbidge's Hybrid Poet's Daffodils.

These are all light and graceful for indoors 3 to 6 in a pot, and elegant in beds, borders, and naturalized. See what grand effect Mr. William Robinson produced with the varieties of Poeticus at Gravetye Manor, page 3.

The Burbidgei Narcissi differ from N. Poeticus in the cup of the flower being a trifle longer; they give a succession of flowers from March to middle of May, commencing in advance of Poeticus ornatus, and one after another following in succession to the middle of May.

- | | per doz. each | s. d. s. d. |

NARCISSUS POETICUS.

(*Star Narcissus.*)

The Purple-ringed Poet's Daffodil.

Poeticus divides naturally into early and late-flowering varieties, a circumstance which is not generally known. It is from the early section, especially *Poeticus ornatus* that Covent Garden is supplied with forced cut flowers from January to March.

March and April Early-flowering Poeticus.

Very beautiful for indoors, 5 bulbs in a 4 or 5-inch pot. Charming in beds, borders, and naturalized. See what Mr. William Robinson says of the beautiful effect of these at Gravetye Manor, page 3.

	per doz. each.

BARR'S BEAUTIFUL ENGLISH DAFFODILS

At LONG DITTON, Surbiton Station, South Western Rail,
Close to the Surbiton New Recreation Grounds.

Extracted from the "DAILY NEWS," March 27th, 1893.

DAFFADOWNDILLIES.

"You are a little early," says Mr. W. Barr, as he leads the way out into the open grounds at Long Ditton, already ablaze with colour—"a little early. In a fortnight's time we shall have more to show you."

It is just as well to be a little early. The flowers that are coming on, and have already got their advance guards flaunting their silken banners on the spring winds, are a cheerier sight than those same flowers when they have reached the zenith of their beauty, and have begun to show signs of exhaustion and decline. And the daffodils themselves are early this year—the

Daffodils
That come before the swallow dares, and take
The winds of March with beauty.

Already they are out here by the thousand—by-and-by they will be out by the million—and a pleasant thing it has been in sauntering along from the station at Surbiton to peep through the ragged hawthorn hedge, itself just bursting into spring verdure, and see the yellow blossoms shimmering over a carpet of fresh green, and dancing to the music of the larks soaring and carolling up into the blue that is hardly so intense overhead as are the streets of Seillas and Chionodoxas now in full glory. What an invigorating, life-giving, thing it is to get out here away from all the strife and turmoil of the town, and to listen to the birds, and the fitful roar of the winds in the naked elms, and to watch the cloud shadows and sunbeams gambolling over the springing turf and the brown clods and the woods and hedgerows! How easy it is to be a philosopher out here—to sit on a five-barred gate and pour contempt on the pitiful wire-puller, stock jobbing, money grabbing, self-seeking, glory hunting that is going on in the crowded city yonder.

"A little early," says Mr. W. Barr, "but come along," and he leads the way out into the grounds, where five acres of daffodils will soon be all aflaut—great Trumpet Daffodils and Hoop Petticoated Daffodils, and Snow Whites and Tenby Yellows, and "Angels' Tears," and Poets' Narcissus, and Golden Spurs, and mountain daffodils, and tiny wee things not so big as a cowslip. Already they are out here in great sheets of luscious colour, and some of them delicately perfumed, and with larks over one's head, and thrushes and starlings warbling around, it is so pleasant to stride about the beds here, to make intimate acquaintance with these lusty trumpeters to the coming floral hosts, and to feel that, under the tuition of an expert, you are rapidly yourself becoming a daffodilidarian, or whatever may be the proper term by which to dub one who knows all about the flower.

"What are the conditions of success, now? What is the secret of growing these things well?"

"Plant early, for one thing. I don't know how the idea originated," says the famous grower, "but there is a very common notion that spring-flowering bulbs should be put in about Lord Mayor's Day. The earlier bulbs are planted the better they do, and September is not too early; indeed, September is a good month for planting."

"And what about soil? They do splendidly with you here, and you seem to have a loamy soil."

"Yes, a light loam. If the soil is stiff they should not be planted deep. In a stiff loam they should be about the depth of the bulb beneath the surface—that is to say, if the bulb is an inch in depth, the crown should be put an inch under ground. If the soil is light they may be planted deeper. Plant

BARR'S BEAUTIFUL ENGLISH DAFFODILS—*continued.*

them carefully and leave them undisturbed, and don't overdo them with manure. If the soil is fairly good they don't want any at all. They'll do best without manure."

And so one goes on, gathering wisdom and filling one's hands with specimen blooms. This one is remarkable for the deep vivid brilliancy of its yellow, another for the size of its trumpet; this one is noticeable for its uniformity of colouring, and that one for the variety in its shades of yellow; this was found in a romantic district of Northern Spain, that one has come from Portugal, and a third has been produced by hybridization in England. And so one moves on, at every step getting the honour of an introduction to some proud dame high up at the Court of Queen Flora—now the Lady Jane and now the Fair Helen, the Lady Grosvenor or the Countess of Annesley. It is delicious to look at a cluster of them all fairly in the face, to breathe in something of their lusty vigour, and to trudge off home with them with something of the exultation with which Paris ran away with Helen, or Bois-Guilbert bore off Rebeeca.

This firm has specially ransacked Spain from north to east and west, and Portugal and the French and Spanish Pyrenees, and what with those they have found, and those produced in England by cross fertilization, the variety is immense. We may now, if we will, have a constant series of daffodils from January till June, and in all sorts of situations. Nothing of the kind can be more delightful for the centre of a bed or an irregular clump on the fringe of a shrubbery than a good well-grown group of Golden Spur—a great favourite, by the way, in Covent Garden, a magnificent trumpet daffodil of brilliant colour and noble form—or of Countess of Annesley, rich and varied in colour. For front situations there are many varieties of dainty little pigmies—such as Cyclaminus, Nanus, Minor, Minimus, and so forth, very dainty in form and pure and brilliant in colour. Others are especially adapted to rock-work, but the most exquisite effects are to be had by letting the stronger and showier kinds grow their own way in the turf of some sylvan glade backed by woods or shrubberies. The spring green of the grass, the lusty vigour of the foliage, and the free growing and the splendid colouring of the daffodils seem altogether to embody the very spirit of the spring—

Lusty spring all dight in leaves of flowers.

We owe to foreign countries and to the cunning of English hybridizers most of our narcissi, but we have our own indigenous daffodil nevertheless, and there are many parts of England where daffodowndillies still perk up their blossoms in the fields just as their forbears did when Shakespeare noted that they came before the swallows dare. They were the old Lent lilies, the affodyles, as our forefathers called them, an old English name which signified "that which cometh early," and they were probably at one time of day quite in the forefront of the great floral procession of the year, the trumpeters that led the way in the "roaring moon," and were followed by all the pomp and beauty of the floral year, culminating in the roses of June and July.
